

**Global Inspection Services** (GIS), as part of its commitment to the environment, in 2018 implemented an environmental management system, in accordance with the ISO 14001 standard.

That is why periodically we identify and evaluate the environmental aspects and impacts, as a consequence from our activity. Then objectives and indicators related to the environment are defined.

The environmental aspects that were significant in 2020 were related to consumption (paper, electricity, water, NDT consumables) and waste generation. Reduction targets were set for all of them.

Despite having gone through a difficult situation at all levels due to COVID-19, Global Inspection Services has maintained its environmental responsibility in all its business activities.

During the last year of maintenance of the environmental management system, we have achieved the following results:

- Paper consumption – 1% reduction
- Energy consumption – 20% increase
- Water consumption – 27% reduction
- NDT consumables consumption – 51% reduction

Specifically, with the reduction of paper consumption we've avoid:

- The felling of 1.68 trees
- The emission of 108 kg of CO<sub>2</sub>
- Consumption of 6 m<sup>3</sup> of water
- Occupation of 0.24 m<sup>3</sup> of landfill
